ABSTRACTED-PUB-NO: WO 200067204A

BASIC-ABSTRACT:

NOVELTY - Scanning of elements contained in the data structure of image data is accomplished using system calls that update access dates associated with the image data. Scanned image data is scored so that the score value associated with scanned image data indicates the likelihood of pornographic content in scanned image data. Scored image data is viewed for detecting pornographic content in the scanned image data.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for the machine readable medium.

USE - For image analyzer.

ADVANTAGE - Enables to perform image recognition or detection for reliably identifying **pornographic images** or images containing pornographic content.

DESCRIPTION OF DRAWING(S) - The figure shows the high level general overview of the image analysis/detection process used in determining whether an image contains pornographic content.
